

# Join the next generation of innovators building the clean energy future

We're looking for students like you to apply your passion and skills to the innovative and vital work that helps us fuel the clean energy economy.

## We don't offer jobs. We offer career opportunities that include:

- Competitive compensation and inclusive benefits
- Growth and development opportunities
- An inclusive culture where you can be yourself
- Opportunities to network with colleagues and get involved in the community where you work and live
- Flexible work arrangements for many positions

## Connect with us:

 University students, text ENERGY to 918-228-6463 for updates on our campus events

# Looking for an innovative career where you can apply your passion and skills to building the clean energy future?

As the world demands **reliable, low-cost, low-carbon energy**, Williams will be there.

We currently handle one third of the natural gas in the United States that is **used every day to heat homes, cook food and generate electricity**. And, we have bigger plans!

In the last 15 years, **a shift to natural gas was the single largest contributor to reducing emissions** in the U.S.\* That's **equivalent to removing 111 million gas powered cars — or nearly every current passenger vehicle in the country — off our roads**. We can do more by addressing additional energy needs in the U.S. and solving global energy challenges with clean, abundant, reliable and affordable natural gas.

And natural gas is critical in expanding our country's use of renewable forms of energy. **Domestic natural gas powers the generation of electricity when the wind isn't blowing, and the sun isn't shining**. It's also there when internationally mined rare earth minerals, used for renewable energy sources, aren't reliably accessible.

We continue to focus on emissions reductions across our natural gas assets, scaling renewables and building a clean energy economy — looking ahead at **innovations and technologies** — like:

- Installing solar-powered capabilities adjacent to our operations
- Evaluating opportunities for Renewable Natural Gas, like dairy farm and landfill gasses
- Exploring opportunities to further decarbonize operations for ourselves and our customers
- Deploying technologies that allow us to certify low emissions natural gas

**We're proud of our innovative people who want to make the world a better place. Explore how you can help us make clean energy happen at <http://www.williams.com/careers>.**
